

## Recycled Content

A carpet has more than 200 different substances. We are working hard to replace these with recycled materials. Our 2030 target is clear: 75% of raw materials must be recycled.

Some of the recycled materials we already use are: Regenerated polyamide yarn from fishing nets, felt from recycled plastic bottles, and recycled polyester primary backings.

Moreover, some of our carpets contain renewable materials, such as wool yarn for our Colortec and Graphic collections and in Highline 80/20 collection, and calcium used as filler in some backings.

The table below summarizes the recycled and renewable content for **ReForm Artworks WT and ReForm Discovery WT**

Recycled Components	%
Post-Industrial/Pre-Consumer	14
Post-Consumer	18
Total Recycled Content (ISO 14021)	31
Total Recycled Content for LEED	24
Rapidly renewable material (<10 years)	0
Renewable material (>10 years)	0
Total renewable material	0
